Hi Omar,

Hope you're well. I just received some **very** urgent feedback from the **Journal of Marine Ecosystems** regarding our 'Atmospheric Dynamics: A Novel Approach' paper. They've sent a list of critical final revisions and a tight deadline – apparently, these are crucial before the next proofing stage, especially given your upcoming presentation at the Journal of Marine Ecosystems next quarter.

I've collated all their comments and my initial thoughts into the attached document, 'manuscript_updates.docx'. Please review it immediately. Your expertise as Head of Department of Climate Modeling and particularly with the Global Education Initiative grant's focus on atmospheric dynamics makes your input here indispensable.

We need to incorporate these changes and send them back **by end of day tomorrow** at the latest, or we risk a significant delay in publication.

Let me know your thoughts as soon as you've had a chance to look. Alex is also looped in.

Best,

Maria
