Hi Kenji,

Hope you're having a productive week.

I'm writing to you about our recently published paper, 'Quantum Error Correction Algorithms: A Novel Approach,' in Advanced Materials Letters. I've been reviewing it again in preparation for some follow-up work, and I've identified a couple of minor but critical points that I believe need immediate addressing, particularly with your upcoming presentation at the Cyber Defense Conference in mind.

There are some specific clarifications and slight rewordings that I think are essential to prevent any misinterpretation, especially regarding the scope of our novel approach. I've detailed these proposed updates and highlighted the relevant sections in the attached document, "manuscript_updates.docx".

Could you please review this as a matter of urgency and let me know your thoughts? I'd like to get these consolidated and potentially prepare a clarification note or ensure our public discussions (like your conference talk) are fully aligned. My aim is to make sure our work remains absolutely watertight.

Let's connect shortly after you've had a look.

Best,

Victoria
