Dear Maria,

Hope you're having a productive week. I know you're incredibly busy, especially with the preparations for your Nature Climate Change presentation next quarter and settling into the new \$3M grant from the Materials Research Council – congratulations again on that; it's fantastic to see our machine learning for climate work gaining such traction! I've also been following your recent posts about new discoveries, always inspiring.

I wanted to quickly loop back on the draft for our potential follow-up paper, the one building on our 'Machine Learning for Climate: A Novel Approach' work for the International Symposium on Fundamental Forces. I just received some critical feedback from an internal reviewer that needs immediate attention if we want to hit the upcoming submission window.

I've incorporated these comments and made some significant revisions, especially in the methodology section, which directly relates to the capabilities discussed in the new grant's focus areas. It's crucial we get your eyes on this ASAP.

Could you please review the attached document, "manuscript\_updates.docx", as soon as possible? I'm hoping we can finalize these changes and get this submitted early next week to meet the internal deadline for initial pre-submission review. Your insights are invaluable, as always.

Let me know if you're free for a quick call later today or tomorrow to discuss.

Best,  
Fatima
